

## INFORMATION SHEET

### ALL-YEAR PVC GAZEBO ROOF

We sew **the PVC roof with** a very strong material (banner), which has a weight of 650 g/m<sup>2</sup>. Thanks to this special material, 100% shading and waterproofing can be achieved. The PVC fabric roof is available in grey, beige, brown and white.

The material's properties, well thought-out solutions and careful finishing allow the cover to be used on domestic frame structures and in public spaces. Roofs made of this material, are valued above all for: 100% waterproofing, functionality (even in temperate climates, they can be operated all year round) with low purchase costs. The elegant appearance, ease of use and ease of assembly/disassembly are additional advantages. They decorate the structure and are the ideal solution wherever the weather can spoil plans. Widely used, the product is particularly chosen for catering gardens, public spaces, as well as for backyard constructions, as protection of a designated area against precipitation - even in winter.
